

Aben Cistus Tita is a Cameroonian with a first class degree in Petroleum Engineering from a top tier university(Covenant University- Nigeria) who is self-motivated, career oriented. He is a social impact enabler who strongly believes that we can all create a better world through technology and social inclusion. He is also a energy enthusiast and a climate action activist.

Growing up as an orphan in an Orphanage Home and as someone who understands the pain of an orphan, he realized that most visitors and donors/well-wishers paid greater attention in providing food items and clothing but little emphasis was placed on skill development for the orphans.

Based on that premise, he founded the ACT foundation aimed at transforming the lives of orphans in order to challenge the status quo. His foundation seeks to empower the less privileged with 21st century skills especially ICT skills as well as tailoring, wood work, capacity building programs needed to create a self-sustaining life.

He is deeply motivated by the desire to impact lives especially those from impoverished backgrounds particularly orphans who have no access to technology. He is taking the lead in molding the lives of orphans from a food/clothing oriented to a technologically inclined orphan.

He is devoted to create the future we envisage tomorrow, today by connecting voluntary tech experts with Orphanages for knowledge transfer in key areas such as Microsoft packages, video editing, web development, which is step to reduce poverty and improve quality education which are part of the Sustainable Development goals. His goal is to set equipped computer labs across orphanage homes and also link seemingly smart but poor kids to scholarship opportunities and grants.
